

## MARK Arts Building

**AVANT ACOUSTICS** had the pleasure of providing acoustical consulting services for the construction of the new Mark Arts building in Wichita, Kansas. This new 40,000-square-foot building features nine studios and a great hall for special events, as well as gallery space.

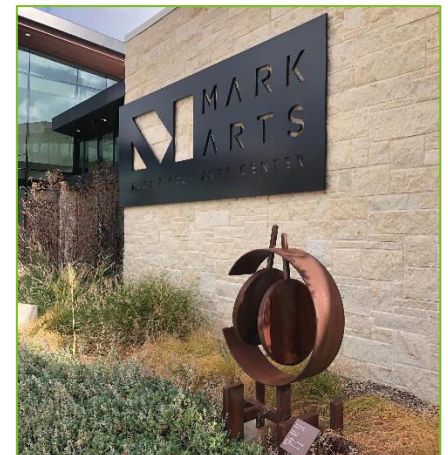

Our acoustical consulting team collaborated with designers from Alloy Architecture to create acoustical solutions for the project's unique architecture. Our team worked on the event space and the gallery.

### **AVANT ACOUSTICS provided the following services:**

- Acoustical Consulting
- Architectural Noise Control
- Mechanical Noise Control

### **Project Highlights:**

The gallery has a lot of exterior glass, which made it more challenging to include acoustical treatments in the room. Our team was able to angle the exterior glass walls to prevent flutter echo and include a center section of stretched membrane acoustical ceiling. This led to a room that works very well acoustically.

### **Project Location:**

Wichita, KS

### **Facilities:**
